The **IP495 Injection Pump**, customized and adapted by SealBoss, is a robust yet compact injection pump. This versatile tool is compatible with a broad array of SealBoss polyurethane injection line products, suitable for those with viscosities ranging from 10 to 800 cps. For more specific information, please get in touch with your SealBoss® technician.

The pump is outfitted with a pressure gauge and a product output assembly, expertly designed to firmly attach to the **SealBoss High Pressure Hose Set**, inclusive of a premium shut-off valve and coupler. Available for separate purchase, the Hose Set can be acquired in a variety of lengths. It offers the option to be fitted with either the standard SealBoss (4 prong) Zerk Coupler or the SealBoss Button Head Slide Coupler, both of which are compatible with the comprehensive SealBoss Mechanical Injection Packer System.

The pump is also equipped with a pressure gauge and a prominent control button for precise adjustments of injection pressure. A unique feature of this pump is its automatic shut-off mechanism that triggers when the set pressure is achieved, and it resumes pumping as the pressure decreases. This attribute not only enhances the injection process speed but also minimizes noise and extends the lifespan of the motor and mechanical components.

Recommended use: Medium to large injection jobs, frequent injection jobs.

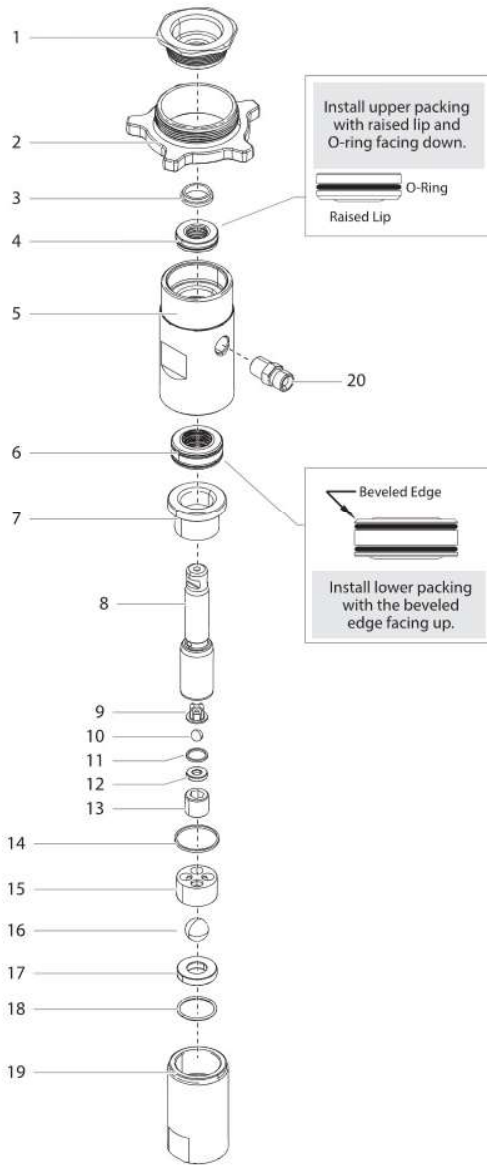

Hose extension with valve and packers sold separately
